

Numeric Representation II

CSCI 2050U - Computer Architecture

Randy J. Fortier
@randy_fortier

DECIMAL REPRESENTATION

Outline

- Binary
- Hexadecimal
- Representing fractional numbers
- Representing characters

$$\begin{aligned} 297 &= 2 \times 10^2 \quad \text{position} \\ &+ 9 \times 10^1 \\ &+ 7 \times 10^0 \\ &\quad \quad \quad \text{base - 10} \end{aligned}$$

Binary

CSCI 2050U - Computer Architecture

Binary - Why?

- A signal needs to differentiate one value from another
 - Electronic: Voltage or no voltage, current or no current
 - Electromagnetic: Varying frequency, varying amplitude, varying phase
- It might be possible to differentiate more than 2 values
 - e.g. Base 4: 0v, 1.5v, 3v, 4.5v
- Attenuation and noise can make these differences harder to discern
 - Binary maximizes the likelihood of detecting the correct value

Voltage Characteristics

- Let's say we decide that 0.0v is a 0 and 0.35v is a 1
 - What if we receive 0.32v?
- We typically design circuits that are not so black and white:
 - 0: 0.00-0.05v
 - 1: 0.30-0.35v
 - Undefined, otherwise

A Binary (Base 2) System

- A base 2 system would have 2 unique digits (0 and 1)
 - This is an 8-bit (binary digit) binary number:

$$\begin{aligned} 01101101_2 &= 0 \times 2^7 + 1 \times 2^6 + 1 \times 2^5 + \\ &0 \times 2^4 \\ &\quad + 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + \\ &1 \times 2^0 \end{aligned}$$

Binary: 0, 1

1 1 0 1 →
3 2 1 0 Decimal
 notation

$$= 1 \times 2^3$$

$$+ 1 \times 2^2$$

$$+ 0 \times 2^1$$

$$+ 1 \times 2^0$$

$$= 8 + 4 + 0 + 1$$

$$= 13_{10}$$

1 0 1 1 0 1 0 0 0 1

Text

- (i) Convert Binary numbers to Decimal Numbers
(ii) Decimal to binary

128 64 0 0 0 0 0 0

1	1	0	0	0	0	0	0
2^7	2^6	2^5	2^4	2^3	2^2	2^1	2^0
(128)	(64)	(32)	(16)	(8)	(4)	(2)	(1)

With 8-bits, the largest number we can represent is $2^8 - 1$

→ 1 1 0 0 0 0 0 0₂ = 192₁₀

$$\begin{array}{r} \textcircled{1} \\ 128 \overline{) 192} \\ \underline{128} \\ 64 \end{array}$$

$$\begin{array}{r} \textcircled{1} \\ 64 \overline{) 64} \\ \underline{64} \\ 0 \end{array}$$

$$\begin{array}{r} 0 \\ 32 \overline{) 0} \\ \underline{0} \\ 0 \end{array}$$

Converting from Binary to Decimal

- Converting from binary to decimal is rather easy:

Converting from Binary to Decimal

- 1. Add each binary digit to the boxes below:

0	1	1	0	1	1	0	1
---	---	---	---	---	---	---	---

Converting from Binary to Decimal

- 2. Multiply each times the corresponding power of 2:

0	1	1	0	1	1	0	1
x128	x64	x32	x16	x8	x4	x2	x1
2^7	2^6	2^5	2^4	2^3	2^2	2^1	2^0
0	64	32	0	8	4	0	1

Converting from Binary to Decimal

- 3. Add up the results:

0	1	1	0	1	1	0	1								
x128	x64	x32	x16	x8	x4	x2	x1								
0	+	64	+	32	+	0	+	8	+	4	+	0	+	1	= 109

Converting from Decimal to Binary

- Converting from decimal to binary is also easy:

--	--	--	--	--	--	--	--

Converting from Decimal to Binary

- 1. Write the number into the left-most box

109							
-----	--	--	--	--	--	--	--

Converting from Decimal to Binary

- 2. Divide by the largest possible power of 2

109							
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1

Converting from Decimal to Binary

- 3. Write the (integer) quotient in the box, below

109							
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0							

Converting from Decimal to Binary

- 4. Write the remainder in the box to the right

109	109						
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0							

Converting from Decimal to Binary

- 5. Repeat for successively smaller powers of 2

109	109	45					
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0	1						

Converting from Decimal to Binary

- 5. Repeat for successively smaller powers of 2

109	109	45	13				
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0	1	1					

Converting from Decimal to Binary

- 5. Repeat for successively smaller powers of 2

109	109	45	13	13			
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0	1	1	0				

Converting from Decimal to Binary

- 5. Repeat for successively smaller powers of 2

109	109	45	13	13	5		
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0	1	1	0	1			

Converting from Decimal to Binary

- 5. Repeat for successively smaller powers of 2

109	109	45	13	13	5	1	
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0	1	1	0	1	1		

Converting from Decimal to Binary

- 5. Repeat for successively smaller powers of 2

109	109	45	13	13	5	1	1
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0	1	1	0	1	1	0	

Converting from Decimal to Binary

- 5. Repeat for successively smaller powers of 2

109	109	45	13	13	5	1	1
÷128	÷64	÷32	÷16	÷8	÷4	÷2	÷1
0	1	1	0	1	1	0	1

Hexadecimal

CSCI 2050U - Computer Architecture

0-9, A-F

0	0	0	0	0	0
1	0	0	0	1	1
2	0	0	1	0	2
3	0	0	1	1	3
4	0	1	0	0	4
5	0	1	0	1	5
6	0	1	1	0	6
7	0	1	1	1	7

8	1	0	0	0	8
9	1	0	0	1	9
10	1	0	1	0	A
11	1	0	1	1	B
12	1	1	0	0	C

101010111001001

(iii) Add numbers in base-2

$$\begin{array}{r} \begin{array}{cccc} & 1 & 1 & 1 \\ 1 & 1 & 0 & 1 \end{array} & \longrightarrow & 13 \\ \begin{array}{ccc} & 1 & 1 \\ \hline 1 & 0 & 0 & 0 & 0 \end{array} & \longrightarrow & 3 \\ \hline & & & & 16 \end{array}$$

(iv) What is the biggest or smallest number that
you can represent given n bits
↓
e.g. 8

Hexadecimal

- Modern computers only use binary
 - Memory addresses
 - Encrypted or compressed data
 - Integers (signed or unsigned)
 - Floating points
 - Text
- Sometimes, us humans need to look at binary data
 - Binary numbers are too long - it is easy to make mistakes

Hexadecimal

- Modern computers only use binary
 - Memory addresses
 - Encrypted or compressed data
 - Integers (signed or unsigned)
 - Floating points
 - Text
- Sometimes, us humans need to look at binary data
 - Binary numbers are too long - it is easy to make mistakes

```
0110110110010110
1100010110100011
1011011101000110
0001110110100110
```

```

```
6D96 C5A3 B746 1DA6
```

Hexadecimal

- Hexadecimal is a base-16 number system
- Advantage:
 - As 16 is a power of 2, binary $\leftrightarrow$ hexadecimal
 - We can use a table for conversion:
 - There are no unmapped numbers
 - 2 hex digits per byte (8 bits)
- Disadvantage:
 - We don't have 16 digit symbols
 - Hexadecimal uses 0-9, and A-F

<i>Binary</i>	<i>Hex</i>
0000	0x0
0001	0x1
0010	0x2
0011	0x3
0100	0x4
0101	0x5
0110	0x6
0111	0x7

<i>Binary</i>	<i>Hex</i>
1000	0x8
1001	0x9
1010	0xA
1011	0xB
1100	0xC
1101	0xD
1110	0xE
1111	0xF

Hexadecimal vs. Binary

- Which is easier to read?
 - Hexadecimal: C07E
 - Binary: 110000000111110

Representing Fractional Numbers

CSCI 2050U - Computer Architecture

132.57

1	3	2	.	5	7
10^2	10^1	10^0		10^{-1}	10^{-2}

1	1	0	.	1	0	1
2^3	2^2	2^1	2^0	2^{-1}	2^{-2}	2^{-3}

Representing Fractional Numbers

- Decimal has been extended to include negative powers of 10:

$$\begin{aligned} &109.4075_{10} \\ &= 1 \times 10^2 + 0 \times 10^1 + 9 \times 10^0 \\ &+ 4 \times 10^{-1} + 0 \times 10^{-2} + 7 \times 10^{-3} + 5 \times 10^{-4} \end{aligned}$$

Representing Fractional Numbers

- Binary can be extended to include negative powers of 2 also:

$$\begin{aligned} & 01101101.01101_2 \\ &= 0 \times 2^7 + 1 \times 2^6 + 1 \times 2^5 + 0 \times 2^4 \\ &+ 1 \times 2^3 + 1 \times 2^2 + 0 \times 2^1 + 1 \times 2^0 \\ &+ 0 \times 2^{-1} + 1 \times 2^{-2} + 1 \times 2^{-3} + 0 \times 2^{-4} + 1 \times 2^{-5} \end{aligned}$$

Floating Point - Scientific Notation

- In decimal, we often use scientific notation:

32,413,788.729

= 0.32413788729 x 10⁸

-0.000005382971

= -0.5382971 x 10⁻⁵

Floating Point - Binary

- In binary, we could do the same thing:

01101101.01101

= 0.110110101101 $\times 2^7$

Representing Fractional Numbers

- IEEE 754 defines a set of standards for representing floating point numbers
 - Floating point - similar to scientific notation, but with a limited number of digits
 - 32-bit (single precision)
 - 64-bit (double precision)

23.45

234.5

2.345

Representing Fractional Numbers

- IEEE 754 single precision format (C++ `float`)
 - Significand - the actual digits
 - Exponent - the power of 2 (i.e. the floating *point*)
 - Sign bit - 1 if negative

Representing Fractional Numbers

- IEEE 754 double precision format (C++ `double`)
 - Significand - the actual digits
 - Exponent - the power of 2 (i.e. the floating *point*)
 - Sign bit - 1 if negative

Representing Characters

CSCI 2050U - Computer Architecture

Representing Characters - ASCII

- One early encoding for characters is ASCII
- Each letter, digit, punctuation is represented by an 8-bit number
- Advantages:
 - Uppercase letters are contiguous
 - Lowercase letters are contiguous
 - Digits are contiguous
- Disadvantages:
 - Really only English is supported

Representing Characters - ASCII

Representing Characters - Other Encodings

- Unicode
 - Supports most writing systems, math symbols, emojis
 - Can store these characters in one of two ways:
 - UTF-8: Stores unicode characters using 8-32 characters
 - English (8-bit) and latin (16-bit) characters are prioritized
 - UTF-16: Stores unicode characters using 16-32 characters

Wrap-up

- Binary
- Hexadecimal
- Representing fractional numbers
- Representing characters

What is next?

- Error detection and correction
- Prefix codes
- Huffman's algorithm
